

We can measure and we must manage – monitoring and targeting delivers results

With UK energy prices having risen 80% in the past five years, and forecast to at least double over the next decade it is imperative that we proactively manage our energy usage and identify any areas of waste.

Installing a simple monitoring and targeting (M&T) system enables usage to be measured and managed, giving you the tools to reduce usage.

M&T uses energy smart meters and sub meters that gather consumption data for remote reporting and billing data; collating it in a graphical format and able to be viewed on your PC, tablet or smartphone. Simple systems can give you a clear picture of a building's usage characteristics accurately measuring base load and energy consumption trends,

but by adding further sub meters there is virtually no limit to the degree of detail that is possible to be measured, monitored and managed.

Functionality in M&T Systems vary and key is one that is simple to navigate, with clear usable reporting.

e-efficient Energy's latest intelligent eM&T system is not only renowned for its usability but features a brilliantly simple Microsoft Excel reporting interface, designed to help you simply create bespoke reports – giving you the reports you need to manage your energy usage.

M&T is a critical low cost tool in reducing energy usage – **if you can't measure it, you can't manage it.** M&T gives you the tools to do this.

To find out how eM&T can help you measure, monitor and reduce your electricity usage and carbon footprint contact James Ketley (pictured) and the e-efficient Energy team on 01909 569016 or visit www.e-efficientenergy.co.uk
